***Acknowledgement***

Receipt is acknowledged of the Amendment filed August 7, 2002.

***Drawings***

The corrected or substitute drawings were received on August 7, 2002. These drawings are approved.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-3, 5-7, 9-11, and 13-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Hagihara (US2001/0001229A1).

Hagihara discloses, in figure 1, a dynamic logic circuit (see paragraph 0005) comprising a pull-down network (10, it is inherent that transistors are connected in parallel or in series depending on whether the logic circuit is either NOR or NAND gate), a PMOS precharge circuit (14), an NMOS ground switch circuit (11), and an output node (60).

The recitation that *“circuit on a SOI substrate”* has not been given patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is

drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478 (CCPA 1951).

***Allowable Subject Matter***

Claims 4, 8, 12 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

Applicant's arguments filed August 7, 2002 have been fully considered but they are not persuasive.

Applicant argues, on page 3 of the Amendment filed August 7, 2002, that "Hagihara does not disclose a plurality of series connected MOS transistors wherein at least one of said plurality of series connected MOS transistors is a NMOS transistor and at least one of said plurality of series connected MOS transistor is a PMOS transistor as claimed in claim 1" and Applicant request that the examiner explain with particularity what the so called inherent connection of MOS transistors is.

As indicated by the Examiner in the last Office Action and also as stated above, Hagihara discloses a pull-down network in figure 1 and also in paragraph [0005]. The paragraph [0005] states that a reference numeral 10 shows a logic circuit (which is a pull-down network). Also the paragraph [0005] states that the logic circuit consists of n-type or p-type MOS transistors or **both**

Art Unit: 2819

**n-type and p-type MOS transistors.** However, figure 1 does not specifically show the connections of n-type or p-type MOS transistors. It only shows a LOGIC CIRCUIT box with a reference numeral 10. However, in order for the logic circuit 10 to work properly with the combinations of n-type or p-type or both n-type and p-type MOS transistors as stated in paragraph [0005], **it is inherent** that the transistors in the logic circuit 10 are series connected between the precharge circuit and a ground switch circuit.

As for the claims 4, 8, 12, and 16, since the drawings and the specification was amended to clarify the connections of the floating substrate body, the rejection has been withdrawn.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Anderson (US 5,530,659) discloses a dynamic circuit with a pull-down network having PMOS and NMOS or any other type of transistor (see col. 2, lines 66 through col. 3, lines 3).

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2819

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
